

USER GUIDE

Nitrate Water Test Kit

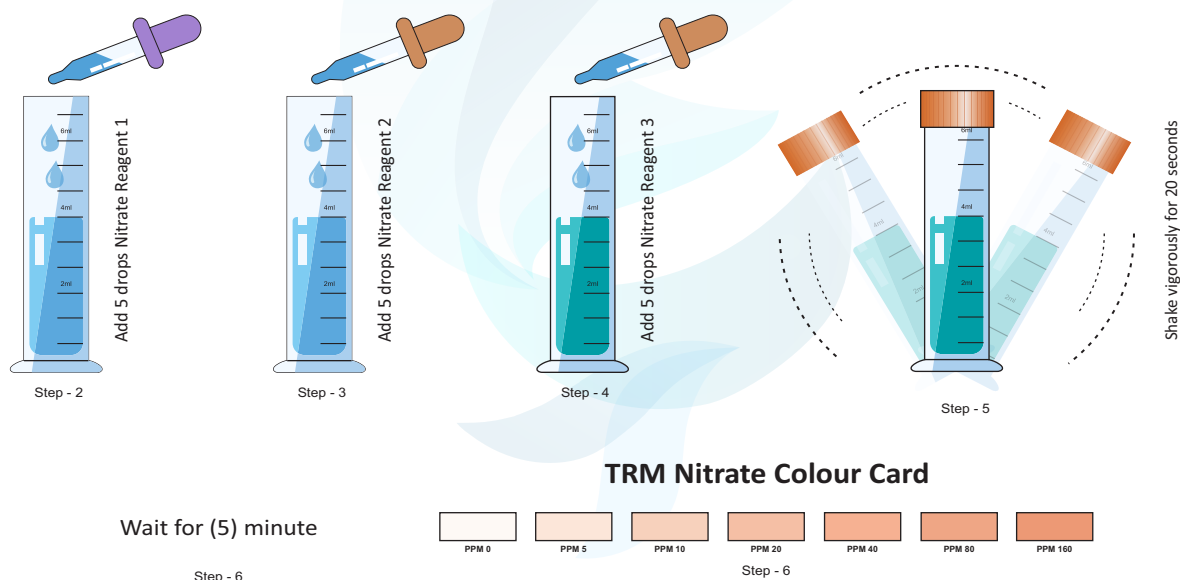

Be sure to remember

1. Make sure the vial is clean or wash the test vial properly before the test.
2. To get maximum accuracy always place the test sample vial against white background.
3. Test the samples immediately after collecting it from the source.

Directions for Testing Nitrate Levels

1. Take 4ML water in vial
2. Add 5 drops **Nitrate Reagent 1**
3. Add 5 drops **Nitrate Reagent 2**
4. Add 5 drops **Nitrate Reagent 3**
5. Caped the Vial and shake vigorously for 20 seconds
6. Wait for (5) minute
7. Match the vial colour only from provided

TRM Nitrate Colour Card

Note: DO NOT hold finger over the open end of the tube, as this may affect the test results. Wait 5 minutes for the colour to develop. See the test results by matching the test solution against **The Nitrate Test Colour Chart**.
